- Jacquard and striper Interface
- Piezo German or WAC actuator
- USB interface for pattern loading
- 512Mbyte memory
- Compatibility with WAC and MMI format
- Compress pattern storage to permit loading of huge pattern (example full 3.000 needles for 10mt fabric long)

Striper program it's made by the jacquard preparation software and then load in the Navigator or create or modify directly in the Navigator with powerful interface. Complicate repetition or easy colours change are possible. With WAC format it's possible also load the striper information directly with jacquard pattern.

- LFA Measurement system integrated, with great accuracy on the yarn consumption, and stop on consumption window changes
- Compatibility with different IRO-Memminger devices: EFS, MRA, MSF and PromoFeed
- Easy detectable stops thanks to the advanced interface

- Completely monitoring and full setting of Electronic Yarn feeder Memminger-IRO
- Wi-Fi module with web server application
